A Su Cient Statistic . T.  $\star (X)$  Is Called Minimal If For Any Su Cient Statistic . T (X)

There exists some function  $T$  such that  $T(X) = R(T(X))$ . Thus, in some sense, the minimal sufficient statistic gives us the greatest data.

**Lecture 5: Estimation**  
**MLE Example** I want to estimate the recombination fraction between locus A and B from 5 heterozygous (AaBb) parents. I examine 30 gametes for each and observe 4, 3, 5, 6, and 7 recombinant gametes in the five parents. What is the MLE of the recombination fraction? Probability of observing  $X = R$  recombinant gametes for a single parent is binomial.

**Lecture 7: Density Estimation**  
 $N(x)$  is a probability density function. Note that most kernel functions are positive; however, kernel functions could be negative. In theory, the kernel function does not play a key role (later we will see this). But sometimes in practice, they do show some difference in the density estimator. In what follows, we consider three most common.
